-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 06 February 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-16 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 9-16 is/are allowed.
- 6) ☒ Claim(s) 1-5, 7 and 8 is/are rejected.
- 7) ☒ Claim(s) 6 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities:

The arrangement of the specification does not conform to 37 CFR 1.77(b) as set forth below.

Thus, the following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (f) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).

Art Unit: 2616

Appropriate correction is required.

Claim Objections

2. Claim 1 is objected to because of the following informalities:

Claim 1 recites, “upon receiving.” in line 10. It is suggested to remove a **period “.”**.

Claim 1 recites, “a distant point code” in line 9 and 10. For clarity, it is suggested to change to “a distant point code” in line 10 to “**the** distant point code”.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 4 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Boese (US 5,084,816).

Regarding Claim 4, Boese discloses a process for setting MTP Level 1 parameters (see col. 14, line 30-67; MTP level 1) in a point code (see FIG. 4, STP 52/54/56/58, SCP 200/590, or SSP 30; see col. 21, line 30-67) connected to a signaling system 7 network (see FIG. 3, SS7 network; see col. 11, line 34-36) through at least one link (see FIG. 5, and FIG. 3, MTP link; see col. 17, line 20-27; see col. 14, line 30-55), comprising:

- issuing a MTP Level 2 alignment request (see col. 17, line 45 to col. 18, line 15, 24-35; Table 4; a combined MTP-2 Link Status Signal Unit (LSSU) and MSU request message to align)

Art Unit: 2616

on said link for a given combination of said parameters (see col. 17, line 45 to col. 18, line 15; a combined LSSU and MSU is sent over the MTP link for a given/predefine/preset parameters (i.e. link status of alignment bit stream, time intervals, and/or a routing label)), and

- when no response is received on said link (see col. 18, line 30-45; receiving no acknowledgment or response on the link), changing said combination of parameters, and repeating said step of issuing an alignment request (see col. 18, line 15, line 24,30-40; see col. 18, line 5-23; 35-43; repeating alignment test by resending more LSSU and MSU by changing pre-set parameter (i.e. changing interval, route label, and status of alignment bit stream));

- when a response is received on said link (see col. 18, line 15-22; 25-40; upon receiving proper acknowledgement message of signal link test), setting said parameters according to the parameters of said combination (see col. 18, line 43-47; link status parameter is updated to available and aligned).

Regarding Claim 5, Boese discloses wherein said alignment request is a normal alignment request (see col. 17, line 45 to col. 18, line 15, 24-35; a combined Link Status Signal Unit (LSSU) and MSU request message to align is a normal request).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2616

6. Claims 1-3 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boese (US 5,084,816) in view of Longfield (US005898667A).

Regarding Claim 1, Boese discloses a process for updating a table of distant point codes (see FIG. 4; a memory/list of destination address/point code in the remote/other STPs, SSP or SCPs), in a point code (see FIG. 4, STP 52/54/56/58, SCP 200/590, or SSP 30; see col. 21, line 30-67) connected to a signaling system 7 network (see FIG. 3, SS7 network; see col. 11, line 34-36) through at least one MTP Level 3 aligned link (see FIG. 5, and FIG. 3, MTP level 3 link; see col. 17, line 20-27; see col. 14, line 30-55), comprising:

listening to point code status messages (see col. 11, line 55-60,65 to col. 12, line 25; Table 1, receiving message signal unit (MSU)) originating from distant point codes forwarded on said link (see col. 12, line 26-67; other SCP or STP), wherein the point codes are identified by point code numbers (see col. 13, line 15 to col. 14, line 15; Table 2 and Table 3, routing label with destination point code (DPC)), and wherein an alignment request (see col. 17, line 45 to col. 18, line 15, 24-35; Table 4; a combined Link Status Signal Unit (LSSU) and MSU request message to align) is issued on said link for a given combination of parameters (see col. 17, line 45 to col. 18, line 15; a combined LSSU and MSU is sent over the MTP link for a given/predefine/preset parameters (i.e. link status of alignment bit stream, time intervals, and/or a routing label)), and if no response is received on said link (see col. 18, line 30-45; receiving no acknowledgment or response on the link), automatically changing the combination of parameters (see col. 18, line 15, line 24,30-40; repeating the alignment test atomically by changing pre-set parameter (i.e. changing interval, route label, and status of alignment bit stream)) and reissuing a further alignment request (see col. 18, line 5-23; 35-43; repeating by resending more LSSU and

Art Unit: 2616

MSU) until a message originating from a distant point code is received (see col. 18, line 15-22; 25-40; proper acknowledgement message of signal link test); and

upon receiving the message originating from a distant point code (see col. 18, line 15-22; 25-40; upon receiving proper acknowledgement message of signal link test), updating the status of the link to available with the point code number of said distant point code (see col. 18, line 43-47; link status is updated as available and aligned associated with destination point code from other STP/SCP node).

Boese does not explicitly disclose updating said table. However, Longfield teaches updating said table with the point code number of said distant point code (see FIG. 2 and 4, step 84; see col. 7, line 64 to col. 8, line 30; updating a list of received broadcast point code in SSP with a new point cod in new SSP. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide updating a table, as taught by Longfield in the system of Longfield, so that it would mange communication with network resources in a manner that does not burden the central processor of the singling point; see Longfield col. 2, line 38-66.

Regarding Claim 2, Boese discloses configuring a primary route to said distant point code through said link (see col. 15, line 50 to col. 16, line 65; configuration/provisioning to remote/other STP or SCP via a link).

Regarding Claim 3, Boese discloses checking said primary route using a signaling route set test (see col. 18, line 15-22; 25-40; performing signal link test to configure/provision/align a link to other/remote STP/SCP).

Regarding Claim 8, Boese discloses a process for determining a point code number (see FIG. 4, STP 52/54/56/58, SCP 200/590, or SSP 30; see col. 21, line 30-67) identifying a point code connected to a signaling system 7 network (see FIG. 3, SS7 network; see col. 11, line 34-36) through at least one link (see FIG. 5, and FIG. 3, via MTP level link; see col. 17, line 20-27; see col. 14, line 30-55), comprising:

- proceeding with MTP Level 2 alignment of said link, by issuing an alignment request (see col. 17, line 45 to col. 18, line 15, 24-35; Table 4; to being MTP-2 alignment, a combined Link Status Signal Unit (LSSU) and MSU request message is sent) on said link for a given combination of parameters (see col. 17, line 45 to col. 18, line 15; a combined LSSU and MSU is sent over the MTP link for a given/predefine/preset parameters (i.e. link status of alignment bit stream, time intervals, and/or a routing label)), and if no response is received on said link (see col. 18, line 30-45; receiving no acknowledgment or response on the link), automatically changing the combination of parameters (see col. 18, line 15, line 24,30-40; repeating the alignment test atomically by changing pre-set parameter (i.e. changing interval, route label, and status of alignment bit stream)), and issuing a further alignment request (see col. 18, line 5-23; 35-43; repeating by resending more LSSU and MSU) until a signaling link test message is received on said link (see col. 18, line 15-22; 25-40; proper acknowledgement message of signal link test), and

- upon receiving a signaling link test message on said link (see col. 18, line 15-22; 25-40; upon receiving proper acknowledgement message of signal link test), defining said point code number as a destination address in said signaling link test message (see col. 18, line 43-47; link status is updated/defined as available and aligned associated with destination point code address

Art Unit: 2616

from other STP/SCP node (also note point code is used to define a destination address, see applicant remark page 7, line 9-14, paper# 8-6-2004), wherein the point codes are identified by point code numbers (see col. 13, line 15 to col. 14, line 30; DPC number).

Boese does not explicitly disclose storing said table. However, Longfield teaches updating and storing in a table with the point code number of said distant point code (see FIG. 2 and 4, step 84; see col. 7, line 64 to col. 8, line 30; updating a list of received broadcast point code in SSP with a new point code in new SSP. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide updating a table, as taught by Longfield in the system of Longfield, so that it would manage communication with network resources in a manner that does not burden the central processor of the signaling point; see Longfield col. 2, line 38-66.

7. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Boese in view of Silverman (US006731649B1).

Regarding Claim 7, Boese discloses wherein a protocol on said link (see FIG. 3, SS7 protocol; see col. 11, line 34-36) and said parameter as disclosed above in claim 4..

Boese does not explicitly disclose TDM protocol, and wherein said parameter further comprises at a time slot. However, SS7 links utilizing TDM protocol which comprise TDM slots is well known in the art and SS7 standards (i.e. GR-1129-CORE, GR-1299-CORE, GR-82-CORE, GR-905-CORE). In particular, Silverman teaches wherein a protocol on said link is a time division multiplex protocol, and wherein said parameters further comprise a time slot (see col. 8, line 54-56; SS7 link occupying TDM slots). Therefore, it would have been obvious to one

Art Unit: 2616

having ordinary skill in the art at the time the invention was made to provide TDM protocol and TDM slots, as taught by Silverman in the system of Boese, so that it would be compatible with existing TDM (i.e. PSTN network).

Allowable Subject Matter

8. **Claim 6** is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
9. **Claims 9-16** are allowed.

Response to Arguments

10. Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ian N. Moore whose telephone number is 571-272-3085. The examiner can normally be reached on 9:00 AM- 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Doris To can be reached on 571-272-7629. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
